The NDSS is administered by Diabetes Australia

Continuous Glucose Monitoring (CGM) Device Summary

How do you want to connect to your CGM device?

1. For information about compatible Apple iOS and Android devices for use with Dexcom G7 visit: dexcom.com/en-AU/compatibility.
2. For information about compatible Apple iOS and Android devices for use with FreeStyle Libre visit: freestylelibre.com.au/glucose-monitoring-system/support.
3. The Dexcom receiver is an alternative to using a compatible iOS or Android device and does not require cellular data or Wi-Fi connectivity. It is not subsidised through the NDSS and can be purchased separately through AMSL. For more details, visit shop.amsldiabetes.com.au.
4. The Freestyle 2 Reader is an alternative to using a compatible iOS or Android device and does not require cellular data or Wi-Fi connectivity. However, it doesn't provide continuous glucose readings – instead, the sensor needs to be scanned using the Reader to see the current glucose reading, the latest 8 hours of glucose data and a trend arrow. NDSS registrants can obtain a FreeStyle Libre 2 Reader for free - for more details, visit freestylelibre.com.au/startmysensor.
5. Dexcom G7 must be synced to a compatible Apple IOS or Android device with Bluetooth connectivity. After syncing the apps will function without cellular data or Wi-Fi connectivity. However, for sharing services to work you will need access to regular cellular data or Wi-Fi connectivity.
6. Access to subsidised Omnipod products through the NDSS requires the person with diabetes to have an active registration with Insulet Australia as an Omnipod user.

The NDSS

Provides a range of support services, information, and subsidised products to help manage your diabetes, stay healthy and live well. Go to ndss.com.au or call the **NDSS Helpline on 1800 637 700** for more information.
