

FACT SHEET:

Continuous Glucose Monitoring (CGM) Device Summary

Device	Works with	Provided through NDSS subsidy	Product lifespan
Dexcom G6	Compatible iOS (Apple) or Android smartphone or smart device OR Tandem t:slim X2 Insulin Pump OR mylife YpsoPump	Dexcom G6 Sensor Dexcom G6 Transmitter ⁴	Sensor – 10 days Transmitter – 3 months
Medtronic Guardian System (4)	Compatible iOS or Android smartphone or smart device	Guardian Sensor (4) Guardian System (4) Transmitter ²	Sensors – 7 days Transmitter – 12 months
Medtronic Guardian Link (3)	Medtronic MiniMed 670G or 640G insulin pumps	Guardian Sensor (3) Medtronic Guardian Link (3) Transmitter	Sensors – 7 days Transmitter – 12 months
Medtronic Bluetooth Guardian Link (3)	Medtronic MiniMed 770G or 780G insulin pump	Guardian Sensor (3) Medtronic Bluetooth Guardian Link (3) Transmitter	Sensors – 7 days Transmitter – 12 months
Medtronic Guardian Link (4)	Medtronic MiniMed 780G insulin pump	Guardian Sensor (4) Guardian Link (4) Transmitter	Sensors – 7 days Transmitter – 12 months
FreeStyle Libre 2	FreeStyle Libre 2 reader or compatible smartphone or device ⁵	FreeStyle Libre 2 sensor	Sensors – 14 days

How do you want to connect to your CGM device?

1. For information about compatible Apple iOS and Android devices for use with the Dexcom G6 visit: <https://www.dexcom.com/en-AU/compatibility/>
 2. For information about compatible Apple iOS and Android devices for use with the Guardian System (4) visit: <https://www.medtronic-diabetes.com.au/mobile-apps-supported-devices>
 3. For information about compatible Apple iOS and Android devices for use with FreeStyle Libre visit: [freestylelibre.com.au/glucose-monitoring-system/support](https://www.freestylelibre.com.au/glucose-monitoring-system/support).
 4. The Dexcom G6 receiver is an alternative to using a compatible iOS or Android device and does not require cellular data or Wi-Fi connectivity. It is not subsidised through the NDSS and can be purchased separately through AMSL. For more details, visit [amslidiabetes.com.au/shop](https://www.amslidiabetes.com.au/shop).
 5. The Freestyle 2 Reader is an alternative to using a compatible iOS or Android device and does not require cellular data or Wi-Fi connectivity. However, it doesn't provide continuous glucose readings – instead, the sensor needs to be scanned using the Reader to see the current glucose reading, the latest 8 hours of glucose data and a trend arrow. NDSS registrants can obtain a FreeStyle Libre 2 Reader for free - for more details, visit <https://www.freestylelibre.com.au/replacement>
 6. The Medtronic Guardian and Dexcom G6 transmitters must be synced to a compatible Apple iOS or Android device with Bluetooth connectivity. After syncing the apps will function without cellular data or Wi-Fi connectivity. However, for sharing services to work you will need access to regular cellular data or Wi-Fi connectivity.
